VAN WETENSCHAPPEN
-:- TE AMSTERDAM -:-

PROCEEDINGS OF THE SECTION OF SCIENCES

VOLUME XXIV
— (Nos. 1—7) —

PUBLISHED BY
"KONINKLIJKE AKADEMIE VAN WETENSCHAPPEN", AMSTERDAM
MARCH 1922

(Translated from: „Verslagen van de Gewone Vergaderingen der Wis- en Natuurkundige Afdeeling" Dl. XXX).

CONTENTS.

ADAPTATION (Light- and dark-) of a plant cell. 17.

AGAR-AGAR (On the movement of pepsin in a protein-containing or protein-free gel of). 269.

ALUMINIUM (The electromotive behaviour of). III. 86.

Anatomy. J. H. ZALMANN: "Concerning an isolated muscle of the ciliary body of the pigeon's eye, situated near the eye-split." 123.

— CHR. VAN GELDEREN: "On the development of the sternum in reptiles." 221.

ANTIGEN (On the formation of heterogenetic) by combination of hapten and protein. 237.

Astronomy. A. PANNEKOEK: "The local starsystem." 56.

— W. H. VAN DEN BOS: "The orbit of *Bu* 6832 = Σ 1834." 72.

— C. H. HINS: "On a change with the declination in the personal equation in meridian-observations." 168.

AUTOMATIC movements (Regarding) of the isolated iris. 84.

AVENA (On anti-phototropic curvatures occurring in the coleoptiles of). 177.

BABINET'S COMPENSATOR (An extension of the theory of). 102.

— (The optical investigation of surface layers on mercury and a more refined method of observation with). 108.

BIRDS (Muscle sound in). 78.

BLAAUW (A. H.) and D. TOLLENAAR. Light- and dark-adaptation of a plant cell. 17.

BOEKE (J.) presents a paper of Mr. J. H. ZALMANN: "Concerning an isolated muscle of the ciliary body of the pigeon's eye, situated near the eye-split." 123.

BOER (S. DE). On the action of the novocain on the tonus of the skeletal muscle. 185.

BÖESEKEN (J.), CHR. VAN LOON, DERX and HERMANS. The condition of motion of the molecules in space. 198.

BOLK (L.) presents a paper of Mr. CHR. VAN GELDEREN: "On the development of the sternum in reptiles." 221.

BOS (W. H. VAN DEN). The orbit of *Bu* 6832 = Σ 1834. 72.

BOSCHMA (H.). On budding and coalescence of buds in fungia fungites and fungia actiniformis. 257.

Botany. TH. WEEVERS: "Concerning the influence of light and gravitation on pellia epiphylla." 2.

— D. TOLLENAAR and A. H. BLAAUW: "Light- and dark-adaptation of a plant cell." 17.

— C. E. B. BREMEKAMP: "On anti-phototropic curvatures occurring in the coleoptiles of Avena." 177.

— V. J. KONINGSBERGER: "A method of recording growth under various external influences." 209.

— W. E. DE MOL: "On hypotriploid dwarf-hyacinths derived from triploid dutch varieties through somatic variation". 251.

BREMEKAMP (C. E. B.). On anti-phototropic curvatures occurring in the coleoptiles of Avena. 177.

BRUINS (H. R.) and ERNST COHEN. The use of the ZEISS waterinterferometer (RAYLEIGH-LÖWE) for the analysis of non-aqueous solutions. 114.

BU 6832 = Σ 1834 (The orbit of). 72.

BUDS (On budding and coalescence of) in fungia fungites and fungia actiniformis. 257.

CARBON (On the behaviour of amorphous) and sulphur at high temperatures and on carbon-sulphides. 92.

CATE (JASPER TEN). Regarding automatic movements of the isolated iris. 84.

Chemistry. A. SMITS and C. J. DE GRUIJTER: "The electromotive behaviour of aluminium". III. 86.

— J. P. WIBAUT: "On the behaviour of amorphous carbon and sulphur at high temperatures and on carbon-sulphides". 92.

— ERNST COHEN and H. R. BRUINS: "The use of the ZEISS waterinterferometer (RAYLEIGH-LÖWE) for the analysis of non-aqueous solutions". 114.

— J. BÖESEKEN, CHR. VAN LOON, DERX and HERMANS: "The condition of motion of the molecules in space". 198.

CILIARY BODY (Concerning an isolated muscle of the) of the pigeon's eye, situated near the eye-split. 123.

COHEN (ERNST) and H. R. BRUINS. The use of the ZEISS waterinterferometer (RAYLEIGH-LÖWE) for the analysis of non-aqueous solutions. 114.

COLEOPTILES of Avena (On anti-phototropic curvatures occurring in the). 177.

CONDITION of motion (The) of the molecules in space. 198.

CONTRACTION (A simple method to obtain a curve of the) of the M. arrectores pilorum. 81.

CORPUT (J. G. VAN DER). On an integral notion of DENJOY. 131.

CRANIAL-FORM (On the) of homo-neandertalensis and of pithecanthropus erectus, determined by mechanical factors. 313.

Cryo-Biology. P. GILBERT RAHM: "Weitere physiologische Versuche mit niederen Temperaturen". 192.

CRYSTALS (Explanation of some interference-curves of uni-axial and bi-axial) by superposition of elliptic pencils. (Second paper). 195.

— (Double refraction by regular). 333.

CURVATURE (On) and invariants of deformation of a Vm in Vn. 146.

— (On anti-phototropic) occurring in the coleoptiles of Avena. 177.

CURVE (A simple method to obtain a) of the contraction of the M. arrectores pilorum. 81.

DARK-ADAPTATION (Light-and) of a plant cell. 17.

DECLINATION (On a change with the) in the personal equation in meridian-observations. 168.

DEFORMATION of a Vm in Vn (On curvature and invariants of). 146.

DENJOY (On an integral notion of). 131.

DERX, HERMANS, J. BÖESEKEN and CHR. VAN LOON. The condition of motion of the molecules in space. 198.

DIBBETZ JR. (G. C.) and P. ZEEMAN. An interference phenomenon due to the introduction of sodium vapour into one of the paths of the FIZEAU MICHELSON interferometer-arrangement. 206.

DUBOIS (EUG.). On the cranial form of homo neandertalensis and of pithecanthropus erectus, determined by mechanical factors. 313.

DWARF-HYACINTHS (On hypotriploid) derived from triploid dutch variaties through somatic variation. 251.

ELECTROMOTIVE behaviour (The) of aluminium. III. 86.

ELLIPTIC PENCILS (Explanation of some interference-curves of uni- axial and bi-axial crystals by superposition of). (Second paper). 195.

EQUATION OF STATE (On the calculation of the molecular quadrupole-moments from the). 162.

— (On the) for arbitrary temperatures and volumes. III. On the law of force between the molecules of mon-atomic substances. 294.

ESCHER (B. G.). On the hot lahar (mud flow) of the valley of ten thousand smokes (Alaska). 282.

EYE-SPLIT (Concerning an isolated muscle of the ciliary body of the pigeon's eye, situated near the). 123.

FIELD of gravitation (On the path of a ray of light in the) of a single material centre. 187.

FIZEAU-MICHELSON (An interference phenomenon due to the introduction of sodium vapour into one of the paths of the) interferometer-arrangement. 206.

FOOTCLONUS (Simple and alternating). 47.

FUNGIA fungites and fungia actiniformis (On budding and coalescence of buds in). 257.

GALVANOMETER (A moving coil) of high sensitivity. 239.

GEL of agar-agar (On the movement of pepsin in a protein-containing or protein-free). 269.

GELDEREN (CHR. VAN). On the development of the sternum in reptiles. 221.

Geology. B. G. ESCHER: "On the hot lahar (mud flow) of the valley of ten thousand smokes. (Alaska)." 282.

GRAVITATION (Concerning the influence of light and) on pellia epiphylla. 2. — (On the path of a ray of light in the field of) of a single material centre. 187.

GRAVITY and pressure of radiation. 64.

GROOT (H.). Gravity and pressure of radiation. 64.

GRUYTER (C. J. DE) and A. SMITS. The electromotive behaviour of aluminium. III. 86.

HAGA (H.) presents a paper of Prof. F. ZERNIKE: "A moving coil galvanometer of high sensitivity." 239.

HAPTEN and protein (On the formation of heterogenetic antigen by combination of). 237.

HERMANS, J. BÖESEKEN, CHR. VAN LOON and DERX. The condition of motion of the molecules in space. 198.

HEUX (J. W. N. LE). Explanation of some interference-curves of uni-axial and bi-axial crystals by superposition of elliptic pencils. (Second paper). 195.

HINS (C. H.). On a change with the declination in the personal equation in meridian-observations. 168.

HOLLEMAN (A. F.) presents a paper of Dr. J. P. WIBAUT: "On the behaviour of amorphous carbon and sulphur at high temperatures and on carbon sulphides." 92.

HOMO-NEANDERTALENSIS (On the cranial form of) and of pithecanthropus erectus, determined by mechanical factors. 313.

INHIBITION (Psychical). 33.

INTEGRAL NOTION (On an) of DENJOY. 131.

INTERFERENCE-curves (Explanation of some) of uni-axial and bi-axial crystals by superposition of elliptic pencils. (Second paper). 195.

INTERFERENCE-PHENOMENON (An) due to the introduction of sodium vapour into one of the paths of the FIZEAU-MICHELSON interferometer-arrangement. 206.

INTERFEROMETER-arrangement (An interference phenomenon due to the introduction of sodium vapour into one of the paths of the FIZEAU-MICHELSON). 206.

INVOLUTORIAL-CORRESPONDENCES (2,2) of the first class. 12.

IRIS (Regarding automatic movements of the isolated). 84.

ITERSON JR. (G. VAN) presents a paper of Dr. C. E. B. BREMEKAMP: "On anti-phototropic curvatures occurring in the coleoptiles of Avena". 177.

JULIUS (W. H.) presents a paper of Mr. H. GROOT: "Gravity and pressure of radiation". 64.

KAISER (Miss L.). Muscle sound in birds. 78.

— A simple method to obtain a curve of the contraction of the M. arrectores pilorum. 81.

KAMERLINGH ONNES (H.). v. ONNES (H. KAMERLINGH).

KEESOM (W. H.). On the calculation of the molecular quadrupole-moments from the equation of state. 162.

KLUYVER (J. C.) presents a paper of Prof. W. VAN DER WOUDE: "On the path of a ray of light in the field of gravitation of a single material centre." 187.

KONINGSBERGER (V. J.). A method of recording growth under various external influences. 209.

KUENEN (J. P.) presents a paper of Mr. P. GILBERT RAHM: "Weitere physiologische Versuche mit niederen Temperaturen." 192.

LAAR (J. J. VAN). On the equation of state for arbitrary temperatures and volumes. III. On the law of force between the molecules of mon-atomic substances. 294.

LAHAR (mud flow) (On the hot) of the valley of ten thousand smokes. (Alaska). 282.

LANDSTEINER (K.). On the formation of heterogenetic antigen by combination of hapten and protein. 237.

LAW OF FORCE (On the) between the molecules of mon-atomic substances. 294.

LIGHT (Concerning the influence of) and gravitation on pellia epiphylla. 2.

— and dark-adaptation of a plant cell. 17.

— (On the path of a ray of) in the field of gravitation of a single material centre. 187.

LOON (CHR. VAN), DERX, HERMANS and J. BÖESEKEN. The condition of motion of the molecules in space. 198.

LORENTZ (H. A.) presents a paper of Mr. C. A. REESER and Prof. R. SISSINGH: "An extension of the theory of BABINET's compensator." 102.

— presents a paper of Mr. C. A. REESER and Prof. R. SISSINGH: "The optical investigation of surface layers on mercury and a more refined method of observation with BABINET's compensator." 108.

— presents a paper of Dr. J. J. VAN LAAR: "On the equation of state for arbitrary temperatures and volumes. III. On the law of force between the molecules of mon-atomic substances." 294.

— Double refraction by regular crystals. 333.

M. ARRECTORES PILORUM (A simple method to obtain a curve of the contraction of the). 81.

Mathematics. JAN DE VRIES: "Involutorial correspondences (2,2) of the first class". 12.

— J. G. VAN DER CORPUT: "On an integral notion of DENJOY". 131.

— J. A. SCHOUTEN and D. J. STRUIK: "On curvature and invariants of deformation of a V_m in V_n". 146.

— W. VAN DER WOUDE: "On the path of a ray of light in the field of gravitation of a single material centre". 187.

— J. W. N. LE HEUX: "Explanation of some interference-curves of uni-axial and bi- axial crystals by superposition of elliptic pencils". (Second paper). 195.

Medicine. I. K. A. WERTHEIM SALOMONSON: "Simple and alternating footclonus". 47.

MERCURY (The optical investigation of surface layers on) and a more refined method of observation with BABINET's compensator. 108.

MERIDIAN—OBSERVATIONS (On a change with the declination in the personal equation in). 168.

MOL (W. E. DE). On hypotriploid dwarf-hyacinths derived from triploid Dutch varieties through somatic variation. 251.

MOLECULES (The condition of motion of the) in space. 198.

— (On the law of force between the) of mon-atomic substances. 294.

MOLENGRAAFF (G. A. F.) presents a paper of Dr. B. G. ESCHER: "On the hot lahar (mud flow) of the valley of ten thousand smokes (Alaska)". 282.

MUSCLE sound in birds. 78.

— (Concerning an isolated) of the ciliary body of the pigeon's eye, situated near the eye-split. 123.

— (On the action of the novocain on the tonus of the skeletal). 185.

MUSKENS (L. J. J.). The myoclonic reflexes. 280.

MYOCLONIC reflexes (The). 280.

NOVOCAIN (On the action of the) on the tonus of the skeletal muscle. 185.

ONNES (H. KAMERLINGH) presents a paper of Prof. W. H. KEESOM: "On the calculation of the molecular quadrupole-moments from the equation of state." 162.

OPTICAL INVESTIGATION (The) of surface layers on mercury and a more refined method of observation with BABINET's compensator. 108.

ORBIT (The) of Bu 6832 = Σ 1834. 72.

Palaeontology. EUG. DUBOIS: "On the cranial form of homo neandertalensis and of pithecanthropus erectus, determined by mechanical factors." 313.

PANNEKOEK (A.). The local starsystem. 56.

PATHS (An interference phenomenon due to the introduction of sodium vapour into one of the) of the FIZEAU-MICHELSON interferometer-arrangement. 206.

PEKELHARING (C. A.). On the movement of pepsin in a protein-containing or protein-free gel of agar-agar. 269.

PELLIA EPIPHYLLA (Concerning the influence of light and gravitation on). 2.

PENCILS (Explanation of some interference-curves of uni-axial and bi-axial crystals by superposition of elliptic). (Second paper). 195.

PEPSIN (On the movement of) in a protein-containing or protein-free gel of agar-agar. 269.

PHOTOTROPIC curvatures (On anti-) occurring in the coleoptiles of Avena. 177.

Physics. H. GROOT: "Gravity and pressure of radiation". 64.

— C. A. REESER and R. SISSINGH: "An extension of the theory of BABINET'S compensator". 102.

— C. A. REESER and R. SISSINGH: "The optical investigation of surface layers on mercury and a more refined method of observation with BABINET'S compensator". 108.

— W. H. KEESOM: "On the calculation of the molecular quadrupole-moments from the equation of state". 162.

— G. C. DIBBETZ Jr. and P. ZEEMAN: "An interference phenomenon due to the introduction of sodium vapour into one of the paths of the FIZEAU-MICHELSON interferometer-arrangement". 206.

— F. ZERNIKE: "A moving coil galvanometer of high sensitivity". 239.

— J. J. VAN LAAR: "On the equation of state for arbitrary temperatures and volumes. III. On the law of force between the molecules of monatomic substances". 294.

— H. A. LORENTZ: "Double refraction by regular crystals". 333.

Physiology. Miss L. KAISER: "Muscle sound in birds". 78.

— Miss L. KAISER: "A simple method to obtain a curve of the contraction of the M. arrectores pilorum". 81.

— JASPER TEN CATE: "Regarding automatic movements of the isolated iris." 84.

— S. DE BOER: "On the action of the novocain on the tonus of the skeletal muscle." 185.

— K. LANDSTEINER: "On the formation of heterogenetic antigen by combination of hapten and protein." 237.

— H. ZWAARDEMAKER: "On superficial and internal processes." 246.

— C. A. PEKELHARING: "On the movement of pepsin in a protein-containing or protein-free gel of agar-agar." 269.

— L. J. J. MUSKENS: "The myoclonic reflexes." 280.

PIGEON'S EYE (Concerning an isolated muscle of the ciliary body of the) situated near the eye-split. 123.

PITHECANTHROPUS ERECTUS (On the cranial form of homo-neandertalensis and of) determined by mechanical factors. 313.

PLANT-CELL (Light- and dark-adaptation of a). 17.

PRESSURE (Gravity and) of radiation. 64.

PROCESSES (On superficial and internal). 246.

PROTEIN (On the formation of heterogenetic antigen by combination of hapten and). 237.

Psychology (Experimental). E. D. WIERSMA: "Psychical inhibition." 33.

QUADRUPOLE-MOMENTS (On the calculation of the molecular) from the equation of state. 162.

RADIATION (Gravity and pressure of). 64.

RAHM (P. GILBERT). Weitere physiologische Versuche mit niederen Temperaturen. 192.

RAY OF LIGHT (On the path of a) in the field of gravitation of a single material centre. 187.

RECORDING-growth (A method of) under various external influences. 209.

REESER (C. A.) and R. SISSINGH. An extension of the theory of BABINET's compensator. 102.

— and R. SISSINGH. The optical investigation of surface layers on mercury and a more refined method of observation with BABINET's compensator. 108.

REFLEXES (The myoclonic). 280.

REFRACTION (Double) by regular crystals. 333.

REPTILES (On the development of the sternum in). 221.

RIJNBERK (G. VAN) presents a paper of Miss L. KAISER: "Muscle sound in birds." 78.

— presents a paper of Miss L. KAISER: "A simple method to obtain a curve of the contraction of the M. arrectores pilorum." 81.

— presents a paper of Mr. JASPER TEN CATE: "Regarding automatic movements of the isolated iris." 84.

SALOMONSON (I. K. A. WERTHEIM). Simple and alternating foot-clonus. 47.

— presents a paper of Dr. S. DE BOER: "On the action of the novocain on the tonus of the skeletal muscle." 185.

SCHOUTE (J. C.) presents a paper of Dr. W. E. DE MOL: "On hypotriploid dwarf-hyacinths derived from triploid Dutch varieties through somatic variation." 251.

SCHOUTEN (J. A.) and D. J. STRUIK. On curvature and invariants of deformation of a V_m in V_n. 146.

SENSITIVITY (A moving coil galvanometer of high). 239.

SISSINGH (R.) and C. A. REESER. An extension of the theory of BABINET's compensator. 102.

— and C. A. REESER. The optical investigation of surface layers on mercury and a more refined method of observation with BABINET's compensator. 108.

SITTER (W. DE) presents a paper of Dr. A. PANNEKOEK: "The local starsystem." 56.

— presents a paper of Mr. W. H. VAN DEN BOS: "The orbit of $Bu\ 6832 = \Sigma\ 1834$." 72.

— presents a paper of Mr. C. H. HINS: "On a change with the declination in the personal equation in meridian-observations." 168.

SKELETAL MUSCLE (On the action of the novocain on the tonus of the). 185.

SLUITER (C. PH.) presents a paper of Dr. H. BOSCHMA: "On budding and coalescence of buds in fungia fungites and fungia actiniformis." 257.

SMITS (A.) and C. J. DE GRUYTER. The electromotive behaviour of aluminium. III. 86.

SMOKES (On the hot lahar (mud flow) of the valley of ten thousand) (Alaska). 282.

SODIUM-VAPOUR (An interference phenomenon due to the introduction of) into one of the paths of the FIZEAU-MICHELSON interferometer-arrangement. 206.

SOLUTIONS (The use of the ZEISS waterinterferometer (RAYLEIGH-LÖWE) for the analysis of non-aqueous). 114.

SOMATIC variation (On hypotriploid dwarf-hyacinths derived from triploid Dutch varieties through). 251.

SPACE (The condition of motion of the molecules in). 198.

SPRONCK (C. H. H.) presents a paper of Mr. K. LANDSTEINER: "On the formation of heterogenetic antigen by combination of hapten and protein." 237.

STARSYSTEM (The local). 56.

STERNUM (On the development of the) in reptiles. 221.

STRUIK (D. J.) and J. A. SCHOUTEN. On curvature and invariants of deformation of a V_m in V_n. 146.

SUBSTANCES (On the law of force between the molecules of mon-atomic). 294.

SULPHUR (On the behaviour of amorphous carbon and) at high temperatures and on carbon-sulphides. 92.

SUPERPOSITION (Explanation of some interference-curves of uni-axial and bi-axial crystals by) of elliptic pencils. (Second paper). 195.

SURFACE LAYERS on mercury (The optical investigation of) and a more refined method of observation with BABINET's compensator. 108.

TEMPERATUREN (Weitere physiologische Versuche mit niederen). 192.

TEMPERATURES (On the equation of state for arbitrary) and volumes. III. On the law of force between the molecules of mon-atomic substances. 294.

TOLLENAAR (D.) and A. H. BLAAUW. Light- and dark-adaptation of a plant cell. 17.

TONUS of the skeletal muscle (On the action of the novocain on the). 185.

VERSUCHE (Weitere physiologische) mit niederen Temperaturen. 192.

VOLUMES (On the equation of state for arbitrary temperatures and). III. On the law of force between the molecules of mon-atomic substances. 294.

VRIES (HK. DE) presents a paper of Dr. J. W. N. LE HEUX: "Explanation of some interference-curves of uni-axial and bi-axial crystals by superposition of elliptic pencils." (Second paper). 195.

VRIES (JAN DE). Involutorial correspondences (2.2) of the first class. 12.

— presents a paper of Prof. J. A. SCHOUTEN and D. J. STRUIK: "On curvature and invariants of deformation of a V_m in V_n. 146.

WATERINTERFEROMETER (RAYLEIGH-LÖWE) (The use of the ZEISS) for the analysis of non-aqueous solutions. 114.

WEEVERS (TH.). Concerning the influence of light and gravitation on pellia epiphylla. 2.

WENT (F. A. F. C.) presents a paper of Dr. TH. WEEVERS: "Concerning the influence of light and gravitation on pellia epiphylla." 2.

— presents a paper of Mr. V. J. KONINGSBERGER: "A method of recording growth under various external influences." 209.

WERTHEIM SALOMONSON (I. K. A.) v. SALOMONSON (I. K. A. WERTHEIM).

WIBAUT (J. P.). On the behaviour of amorphous carbon and sulphur at high temperatures and on carbon-sulphides. 92.

WIERSMA (E. D.). Psychical inhibition. 33.

WOUDE (W. VAN DER). On the path of a ray of light in the field of gravitation of a single material centre. 187.

ZALMANN (J. H.). Concerning an isolated muscle of the ciliary body of the pigeon's eye, situated near the eye-split. 123.

ZEEMAN (P.) presents a paper of Prof. A. SMITS and C. J. DE GRUYTER: "The electromotive behaviour of aluminium." III. 86.

— and G. C. DIBBETZ JR. An interference phenomenon due to the introduction of sodium vapour into one of the paths of the FIZEAU-MICHELSON interferometer-arrangement. 206.

ZEISS WATERINTERFEROMETER (RAYLEIGH-LÖWE) (The use of the) for the analysis of non-aqueous solutions. 114.

ZERNIKE (F.). A moving coil galvanometer of high sensitivity. 239.

Zoology. H. BOSCHMA: "On budding and coalescence of buds in fungia fungites and fungia actiniformis." 257.

ZWAARDEMAKER (H.). On superficial and internal processes. 246.

— presents a paper of Dr. L. J. J. MUSKENS: "The myoclonic reflexes." 280.
